Continuation of 11. does NOT place the application in condition for allowance because: The rejection of claims 27 and 29-33 is maintained for the following reasons:

1. With regard to Applicant's argument that the Locking Member "70" Is Not Integral With The Smith's "Substrater": According to Dictionary.com Unabridged, Integral is define d as "consiting or composed of parts that together constitute a whole." Since the locking member "70", the substrate/headliner portion and other elements, together, constitute the the speaker system of Smith, they therefore are fairly interpreted as being integrally formed as claimed.

2. Regarding the Applicant's argument the Smith Fails To Teach "Simultaneous Ramping And Rotationally Moving": In Column 4:66-67, Attachment member "70" comprises leg "75", along the length of which, speaker "50" is compressed such that flanges "62" and "64" of the speaker unit passes through aperture "81". The compression of said speaker "50" along the length of leg "75", is interpreted as corresponding the "ramping".

While, Column 5:8-11, clearly teaches a "rotationally moving" attachment member "70". As a whole, column 4:66 - column 5:11 teach that the compressive force must be applied while rotating said attachment member "71" so as to lock the speaker unit into position, therein teaching "simultaneous ramping and rotationally moving" as claimed. The rejection is therefore maintained, since said "ramping" of claim 27 has not been clearly and distinctly defined as in independent claims16 and 21..
